DETAILED ACTION

Allowable Subject Matter

Claims 1-6 and 8-13 are allowed.

The following is an examiner's statement of reasons for allowance:

*In regard to independent **Claim 1**, the closest prior art of record fails to teach or reasonably disclose the combination of the limitations of claim 1 that include, "input means for receiving an input of the image data having the second frame rate from the first another image processing apparatus,
wherein the conversion means further converts the image data having the second frame rate input by the input means to image data having the third frame rate."*

*Regarding dependent **Claims 2-6 and 8-10**, these claims are allowed because they depend on allowed independent claim 1.*

*In regard to independent **Claim 11**, the closest prior art of record fails to teach or reasonably disclose the combination of the limitations of claim 11 that include, "input means for receiving an input of the image data having the second frame rate from the first another image processing apparatus,*

wherein the conversion means further converts the image data having the second frame rate input by the input means to image data having the third frame rate."

With regard to independent **Claim 12**, the closest prior art of record fails to teach or reasonably disclose the combination of the limitations of claim 12 that include, "input means for receiving an input of the image data having the second frame rate from the first another image processing apparatus,

wherein the conversion means further converts the image data having the second frame rate input by the input means to image data having the third frame rate."

In regard to independent **Claim 13**, the closest prior art of record fails to teach or reasonably disclose the combination of the limitations of claim 13 that include, "input means for receiving an input of the image data having the second frame rate from the first another image processing apparatus,

wherein the conversion means further converts the image data having the second frame rate input by the input means to image data having the third frame rate."

The following are the closest references found:

Washino (US Patent No.: 5999220) disclose an audio/video production system facilitates professional quality image manipulation and editing. A program input may be translated into any of a variety of graphics or television formats, including NTSC, PAL, SECAM and HDTV, and stored as data-compressed images, using any of several commercially available methods such as Motion JPEG, MPEG, etc. While being processed, the images may be re-sized to produce a desired aspect ratio or dimensions using conventional techniques such as pixel interpolation, and signals within the video data stream optionally may be utilized to control "pan/scan" operations at a receiving video display unit, in case this unit does not have the same aspect ratio as the source signal. Other information may be utilized to. restrict playback of the program material based on predetermined regional or geographical criteria. Frame rate conversion to and from conventional formats is performed by using the prevailing techniques employed for film-to-NTSC and film-to-PAL transfers, or by inter-frame interpolation, all well known in the art, or by reproduction of the program at a selected non-standard frame rate, optionally combined with these prevailing techniques. By judicious selection of the optimal digitizing parameters, the system allows a user to establish an inter-related family of aspect ratios, resolutions, and frame rates, yet remain compatible with currently available and planned graphics and television formats.

Hinson (US Patent No.: 7103260B1) discloses an editing system in which image data representing an initial moving image input in a first format at a corresponding rate is stored in a store and is manipulated to produce image data

representing an edited moving image for output in a second format at a corresponding data rate. The system is arranged such that processing is effected at a data rate which is variable and determines the second data rate.

Conclusion

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
